

Senior Design Projects Capstone Program

Department of Mechanical Engineering
 The University of Texas at Austin

The Mechanical Engineering [Senior Design Projects](#) program at The University of Texas at Austin serves as the capstone design experience for UT Austin's mechanical engineering students as they prepare for engineering careers. In this program, a team of 3 to 4 ME senior undergraduates works on an industry sponsored project for a full spring, summer, or fall semester.

Benefits of sponsorship:

- Team up with a top-ten ranked engineering department.
- Connect with first-rate students.
- Develop partnerships with key faculty with potential for larger future collaborations.
- Expand visibility and esteem of your organization across campus.
- Gain insights into your challenges from new perspectives, with nominal outlay.

Project work includes: problem definition, patent searches, alternative designs, design solution, cost analyses, etc. Please review our [website](#) for more details.
